**International wars and disasters victims protection associations -IRVD** is an international non - governmental organization established by a group of volunteers to help suffered people in all humanitarian crises, registered in USA in 2017. IRVD manages development programs, advocates to empower civil societies and local governance.

IRVD is implementing programs in Yemen, Syria, Turkey, Lebanon, Sudan, Somalia, Iraq, Palestine through regional offices which were registered in the forementioned countries as IRVD with focusing on the following sectors Health, Nutrition, Education, Food Security and Livelihoods (FSL), Protection, Shelter & Non-food items, Wash and Sanitation.

#### **IRVD aims to:**

- 1- Enhance and develop the local communities' capacity in the Humanitarian response.
- 2- Coordination with local authorities, to ensure the achievement of humanitarian activities while preserve IRVD values
- 3- Focus on the vulnerable groups.

#### **Our Vision**

A world where every human has **access** to basic **human rights** and **resources without discrimination**.

#### **Mission Statement**

Ensure the accountable and transparent provision and access of cross-sectoral humanitarian support for all communities within crises to have the access to basic needs and human rights while empowering them to take active civic role.

#### **Objectives**

- Conduct needs assessment in affected areas, to avoid duplication within humanitarian response.
- Sharing and Coordination with local and international organizations in filling gaps, identifying need, and expediting delivery of aid
- Implement projects across all sectors according to high quality humanitarian standard.
- Develop the capacities of local institutions to provide an appropriate understanding of governance
- Increase awareness of human rights
- Empower communities and advocate for neglected populations.

#### **IRVD Values**

IRVD is obligated for all Humanitarian principles, and was signed the Code Of conduct, and the main 4 principles IRVD commitment are: Humanity, Neutrality, Impartiality, Independence, and Do No Harm.

## **Data and Needs Assessment Unit (DNA)**

The Data and Needs Assessment Unit (DNA) is committed to providing accurate information and research backed support. The organization has been able to develop a multitude of comprehensive needs assessments and scenario reports on different areas in Syria and other countries (Yemen, Lebanon, Turkey.), providing background information to aid in better coordination with valuable research. in addition to develop Programs and to enhance the effects of projects implementation.

## **Comprehensive Reports**

- With a strong team of researchers and analysts, DNA is able to provide the humanitarian community with analytical reports containing possible future scenarios on specific areas in crisis areas. The team works with experienced individuals who know humanitarian situation very well, as well as cross check information, provide background, to develop accurate reports with strong analysis.

## **Consultancy**

- The DNA Unit provides consultancies to local and international organizations, who are seeking new opportunities, need an accurate Needs Assessment report in a certain area or are seeking a comprehensive background on possible areas and partners.
- Evaluation
- The DNA unit provides evaluations on IRVD projects and is also able to provide third party evaluation reports on project impact implemented by IRVD or other organizations.

## METHODOLOGY

IRVD Organization, in an attempt to capture a view of the Education humanitarian situation, needs, and gaps in Yemen Arab Republic communities, performed Joint-Sectoral Education Needs Assessment, due to rapid change in the security situation, displacement, and the demographic change on the ground, besides the need to updated information for the education process, also in some locations no information was submitted, also to shed the light On the gaps and needs besides the suffering that teachers, students, and parents in teaching, also the continuous suffering that had come with the spread of COVID 19 in all the world, which had shown new gaps, beside the change in the needs which mostly many organizations and working partners hadn't take in consideration while the context is changing.

Even though aid entered into this region through the Saudi's borders crossings with Yemen, but the huge needs and growing gaps, also the change in the security situation which Yemen is suffering from, in addition to the large flow of IDPs that changing in the whole country, while many of the schools are already occupied with IDPs, furthermore, the sudden floods that had caused demolition in the school's structures, while the most of schools are suffering of demolition partly or wholly, The humanitarian situation changes rapidly and significantly across the country, depending on the intensity of conflict, besides the displacement patterns and access to basic services and assistance. The reasons for showing the gaps can't stop here many other factors are affecting the education process in Yemen, so due to all reasons, it's time to shed the light on these gaps and needs.

In the twelfth year of the Yemini crisis, all country's population faces huge humanitarian obstacles with continued conflict affecting civilians, lack of shelter, food and non-food items (NFIs), basic services, education services, drinking water, and other necessities, besides the speed of many pandemics that will not be affecting only Yemen but the whole other neighboring countries.

This report provides a community-level analysis of the Education humanitarian situation in Yemen's communities, this survey had been in 49 sub-districts that had been distributed in 4 governorates all over Yemen, for over three months from May to early June 2022.

So, to help humanitarian actors with information about the developments and the last change in the humanitarian needs, this report offers a Joint-Education sectoral analysis in this area. Data collection was completed through Key Informants KI interviews with at least three KI in each community (395KIs) (%65Males, %35 Female). Types of KI included a range of representatives of civilian bodies, such as local council members, teachers, NGO workers, directors, and the ministry of education.

## LIMITATIONS

As it had been mentioned that most of the schools in all Yemen Governorates had been covered, but the wide range of restrictions on movements, the low-security situation, and the rapid change in these locations on demographics, the precaution measures for COVID 19, the local and economic situation all these factors were challenges during the data collection and verification phases of reporting for this area, even though of all these difficulties and obstacles but it hadn't affected the quality, time or scope of data collection or data analysis plan.

## Keyfindings:

IDPs at national level, in talking about circa 1.32M when mentioning IDP individual, in addition IDPs at governorate level, at Ma'rib governorate on the verge of 806.13K pointing IDP individual, in talking about Ta'iz governorate circa 397.7K when mentioning IDP individual IDPs. Residents at governorate level, for Ta'iz governorate within sight of 2.71M pointing to Resident, at Hadramawt governorate near 1.53M resident.

Mention total population at governorate, for Ta'iz governorate about 3.1M while pointing to total population individual, at Hadramawt governorate nearby 1.55M individuals.

The statistics had shown in Yemen that in mentioning the people with special needs at national level, in talking about approximately 1.02M when mentioning individual with special need.

Lack of services was the most security and safety factors that the people suffer from in this area by around 31% of the covered communities and this was mainly in Hadramawt governorate by more than 35% of the communities, in the same context at the teachers level still lack of services is the most security and safety factors that the teachers fear in the covered area by almost of the same percentage at national level, while at governorate level it reached more than 42% of communities in Hadramawt governorate.

The most spread schools' type was the completed building of cement and iron by around 63% of the schools in this area at the national level, while unfinished buildings had reached 18% of the total schools, mainly these two types were primary schools, in the meantime around 73% of these schools had IDP students, also the report showed that around 90% of secondary schools had IDP students.

Around 58% of schools were partially demolished at the national level, mainly these schools were secondary schools, while to mention that these schools were mainly located in Aden governorate by around 61% of schools.

Regarding the needs of destructive schools, maintenance of WASH facilities was by 21% of the whole covered schools, in the same context building wash facilities was the second need by around 18%, mainly these needs were in primary schools and in Aden governorate.

The total amount needed in this area for maintenance or repair works was around 10203.8M, mainly these costs were for the primary schools, also Aden governorate showed that most of this amount was needed for this area.

If the fund secured mostly that will lead to improving of the education quality by around 26% of the schools at the national level, also it will lead to increase the number of students and will help alleviate the schools dropout.

Around 138.5K students are studying in these schools, out of them around 3.2K male students with special needs, also the most of the total students were in the primary schools by around 114.9K, also to mention that Aden governorate had the highest number of students by around 58.6K student.

Around 46% of schools suffering from schools dropout, this was mainly in the secondary schools by around 60% of these schools, in the meantime the most reasons for schools dropout was the need for work in 18% of the schools, while around 12% of schools showed that lack of education materials was one of the main reasons, while the need to work was one of the main reasons, the report had showed that most of these students work in the markets and in craft work.

The needs to reduce the severity of schools dropout for male was mainly the need for awareness campaigns by 15% of the schools, while other reasons almost with the same percentage showed the need for schools maintenance, availability of education staff, and improving the quality of education.

The report had showed that around 47% of schools had access difficulties, while also to mention that around more than half of secondary schools had access difficulties, the main reasons for that was lack of transportation by around 40% of the schools at the national level, which reflected the other reason which is distance from school as a difficulty to get access to schools, as solution to improve the accessibility to schools, mainly by KI interviewed the main need was to availability of transportation, improving public security and availability of roads.

The need for male and female teachers didn't show that difference for the priority of needs, mainly the most need was availability of salaries by around 15% of the communities at the national level, while availability of training was by 12% of communities, also to mention that around 43% of male teachers hadn't received any training in the past year, while for the female teachers it reached 40% of teachers hadn't received any training the past year, in the same context the most needed training for both male and female teachers was improving the quality of education and classroom management by almost half of the teachers in the covered area.

Around 42% of male teachers hadn't get fully vaccinated against COVID 19, while this was by more than half of the female teachers at the national level, the report had shown that the reasons hadn't been showed any differ for both male and female teachers, main reason was lack of persuasion from teachers about the vaccine and it's benefits by around more than half of the teachers, while lack of vaccines was the second reason by 17% of the total teachers in this area.

With the difficulties at all levels, it was normal that around more than 83% of schools hadn't any clinics for students, while this was mainly in the secondary schools by around 88% of schools, in the meantime Ma'rib and Ta'iz governorates had the highest percentage which reached more than 84% of schools in this area, the most spread type of difficulties regarding clinics was the unavailability of medicines, by around 39% of schools, also to mention that 22% of schools at the national level had shown unavailability of dedicated cadres.

With the unavailability of schools clinics, the organization had worked on providing schools with mobile clinics, the report had shown that 71% of schools had a visit from mobile clinics once a month, this was mainly for the primary schools by more than 72% of schools at the national level.

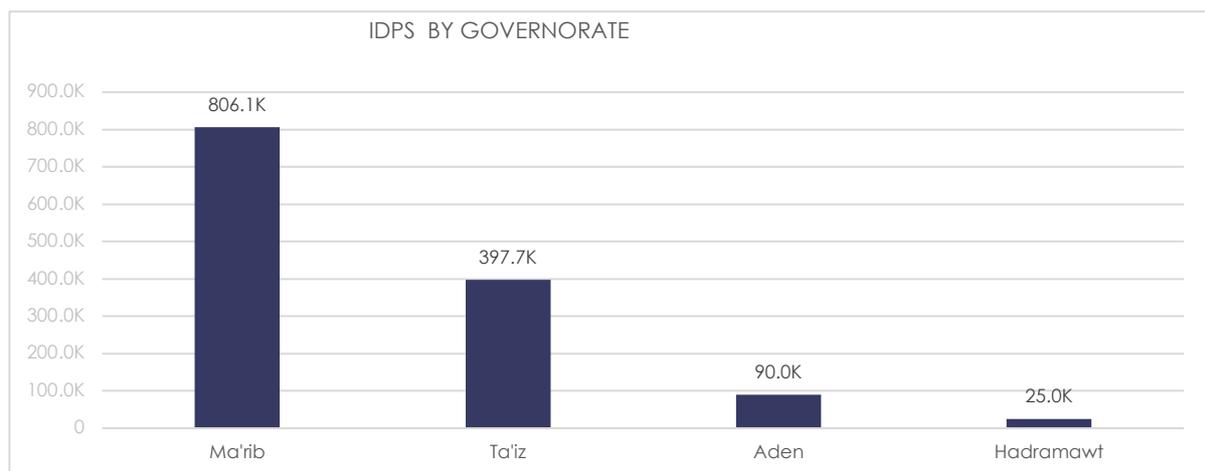

Mainly ministry of health is the responsible entity for vaccination by around 70% of schools, while around 11% of schools had shown that village leaders are the responsible for providing vaccines, this was mainly in Ma'rib governorate by around 29% of schools.

The main needs for medical clinics in the schools was medicine by around 32% of schools at the national level, while the need for medical awareness campaigns was in 23% of schools, and off course the need for mobile clinics was in 16% of schools.

Around 78% of schools hadn't showed any availability of WASH facilities in the schools, while to mention that even the WASH facility is available but for all covered schools hadn't showed the availability of WASH rooms for females, the total amount needed for WASH facilities was by around 2764M, mainly this amount needed in primary schools, so the basic needs were around building walls by 16% of schools, also the need for maintenance of doors was in 15% of schools, while the need for water taps was in 13% of schools at the national level.

Comparing to the last year, around more than half of the schools had shown that the education situation is slightly improved, but still the needs and gaps are high and lack of services is the main reason for most of the suffering, also to mention that 8% of schools at the national level had shown great deterioration of the education system compared to last year, mainly this was in Aden governorate by around 25% of schools in this area.

While to mention violence spread among students at KI gender point of view, in talking about female KI nigh 66% announced that one-three, furthermore it was found that for on the point of 22% meet with that are four-six, as well while mentioning on average of 12% agree on that are seven-ten pointing to violence spread among students.

Additionally, violence spread among students at KI gender point of view, for male KI nearby 71% told that one-three, Additionally, in talking about on the verge of 17% told that are four-six while mentioning violence spread among students, Also, the results had shown that in talking about close to 12% told that are seven-ten.

## RECOMMENDATION:

- Access to safe educational opportunities remains a challenge for children in Yemen, reach out-of-school children in all Yemen governorates using life-saving protection-oriented implementation modalities. Access strategies will include small-scale rehabilitation of damaged schools and establishment of other safe temporary/ alternative learning spaces through a gender-sensitive and disability-friendly approach. Restoration of partially destroyed schools and rebuilding destroyed schools, as Education facilities for IDP children are often limited and damaged by the conflict, with insufficient room in temporary learning spaces, as of overcrowding in existing schools and the closure of schools for being functional again. Establishing learning centers while ensuring a protective environment for the most vulnerable school-age population.
- Supporting all non-food items, including clothes, cooking fuel, and cash assistance, also by Securing a source of electricity supply and repairing the electricity.
- Preventing infectious disease outbreaks in schools and learning environments through increasing awareness on hygiene practices and provision of equitable services for accessing health centers and by provision and dissemination of health and hygiene Education packages.
- Contributing to famine prevention of the most vulnerable Yemeni students and learners through ensuring access to feeding and nutrition services, and supporting increasing caregivers' resilience, also by providing school feeding, healthy meals and awareness of good nutrition practices.
- Preventing the most vulnerable school-age girls and boys from risks of violence by ensuring access to safe and inclusive learning environments that promote well-being and resilience. Also, reach children who are out of school, internally displaced, have disabilities and are at risk of dropping out with protective learning opportunities in formal and non-formal inclusive education.
- Child protection interventions including the integration of mental health and psychosocial support and other specialized protection services. It is increasingly important to expand access to psychosocial support and recreational activities for vulnerable children, particularly in areas of high severity of need.
- Teachers and students suffer from stress and psychosocial disorders due to the protracted nature of the crisis, and teachers require support to address their own and their students' psychosocial support needs so to ensure coordination with other relevant sectors to strengthen synergies and complement the response to other vulnerable children including refugee and migrant school children.
- Providing access for children to schools and learning centers that provide quality education in a protective and welcoming environment and ensuring that those students remain in school. Therefore, non-formal education opportunities and pathways back to inclusive education at age-appropriate levels are increasingly required to address the complex learning needs of children, including children and adolescent girls and boys whose education has been disrupted for years, as well as children with specific physical and psychological needs. It is assumed that many of the internally displaced children are out-of-school due to displacement.

- Non-formal education learning programs such as the accelerated learning programme, which combines two academic years into one, and the basic literacy and numeracy programme, to bring children to age-appropriate educational levels. Non-formal education learning programmes give children who have no access to formal education opportunities to an alternative education in line with the national curriculum.
- The shortage of teachers in Yemen results in a high student-teacher ratio and irregular payments to teachers of stipends and incentives do not meet their families' basic needs. Thousands of teachers continue to work voluntarily, or take second jobs, which makes it harder for them to concentrate on teaching, so to equip teachers with skills for teaching in formal and non-formal education modalities such as accelerated learning, remedial teaching, child-centred pedagogy and positive classroom management to cope with overcrowded classrooms, address and accommodate host community, displaced and returnee children within their classes.
- Provide learning materials to children as they are often learning without learning materials in very poor learning spaces for only few hours a day, especially in hard-to-reach areas.
- Provide protection services to women, men, girls and boys to mitigate and address protection risks due to conflict, disasters, food insecurity and epidemics, ensuring attention to specific needs and prioritizing the most vulnerable including displaced persons, and to support community-based mechanisms that promote human rights, inclusiveness, safety and dignity and help to identify and address protection risks.
- Raising awareness of risks posed by mines and provide explosive ordnance risk education activities.
- Provision of cash assistance to the families in critical socioeconomic situation and with education needs which will decrease the percentages of students drop out especially in the primary stage.
- Provision of relevant supplies and equipment to nutrition workers in nutrition sites and facilities, mobile teams and community health and nutrition volunteers. In addition, systematic screening and the timely implementation of life-saving and preventive nutrition response packages will improve the overall nutritional status of children under five in the community, increase immunity, and in turn reduce morbidity and mortality associated with childhood illnesses
- Support treatment of acute malnutrition through identification and referral of children under five with acute malnutrition, treatment cases of children under five with severe acute malnutrition without complications in outpatient treatment programmes and treatment cases of children under five with severe acute malnutrition with complications in therapeutic feeding centres. Cash and vouchers will also be provided to cover transport costs for children suffering from severe acute malnutrition with complications and those admitted into outpatient therapeutic programmes.
- Supporting the health system and community resilience at all levels, and prioritizing reproductive health, mental health and psychosocial support, severe malnutrition response and management of non-communicable diseases;
- Providing essential equipment to public health facilities, training of health-care workers, community health workers and expanding education health programming, particularly to vulnerable and high-risk populations in addition to financial support to the health care workers considering salary shortages and economic crisis in Yemen, and that's could be by building health units in the schools with high quality of equipment, first aid kits, and under the health ministry supervision.

- Expand mental health and psychosocial support services, capacity and coverage, including training of health care workers and provision of psychotropic medicines to certified professionals. It will also strengthen child health services, including integrated management of childhood illness and ensuring routine vaccination for children, including through immunization campaigns as well as catch-up activities in low coverage areas. Targeted vaccination campaigns for cholera, measles, polio and diphtheria will be pursued in priority districts and sub-districts.
- Maintain water and sanitation infrastructure at minimum levels of operation to enable sustained access to safe WASH services, targeting as well as drinking water institutions.
- Work to support the administrative structure of the school health units, strengthen its administrative governance, clarify the mechanisms of administrative subordination which caused the absence of conflict between education and health ministries in the relationship as the administrative dependency is currently not clear.
- Strengthening training programs for school health cadres in different governorates for school health services and how to deal with these age groups of students.
